Subject Index of Volume 236

Adhesion
application of nickel plating for the synthesis of chemical vapour deposition of diamond on steels, 111
interface structure and adhesion of sputtered Ti layers on Si: the effect of heat treatment, 236
measurement of the adhesion of TiN and Al coatings by fracture mechanics tests, 253
Aluminium
amorphous $W_{40}Re_{40}B_{20}$ diffusion barriers for ⟨Si⟩/Al and ⟨Si⟩/Cu metallizations, 301
kinetics of aluminium film oxidation measured by a modified quartz crystal microbalance, 199
measurement of the adhesion of TiN and Al coatings by fracture mechanics tests, 253
properties of titanium and aluminum thin films deposited by collimated sputtering, 267
thermal stability of pyrolytic tin oxide films on aluminium, 40
Amorphization
new trends in analytical tribology, 173
Amorphous materials
amorphous $W_{40}Re_{40}B_{20}$ diffusion barriers for ⟨Si⟩/Al and ⟨Si⟩/Cu metallizations, 301
effect of oxygen on hydrogenated amorphous carbon films, 77
evaluation of amorphous (Mo, Ta, W)–Si–N diffusion barriers for ⟨Si⟩|Cu metallizations, 319
fabrication of amorphous diamond films, 82
properties of reactively sputter-deposited Ta–N thin films, 347
Anisotropy
photothermal characterization of optical thin films, 191
Atomic and molecular beam studies
low temperature preparation of transparent conducting ZnO:Al thin films by chemical beam deposition, 14
Atomic force microscopy
effect of oxygen on hydrogenated amorphous carbon films, 77
nucleation of diamond particles by hot filament chemical vapour deposition, 115
optical properties and surface morphology studies of palladium contacts on mercuric iodide single crystals, 180
Auger electron spectroscopy
spatial composition variation in sputtered Ti–W films, 334
thermal stability of pyrolytic tin oxide films on aluminium, 40

Boron nitride
properties of mixed-phase BN films deposited by r.f. PACVD, 96

Calibration
calibration of an off-axis quartz crystal thickness monitor for a pulsed laser deposition system using a high resolution scanning electron microscope, 125
Carbides
thermal reaction of Ta thin films with polycrystalline diamond, 72
Carbon
characterization of magnetron-sputtered diamond-like thin films for optical coatings in IR, 67
energy calibration accomplished by proton resonance scattering simulation, 159
fabrication of amorphous diamond films, 82
further investigation of proton elastic scattering cross-section on carbon and silicon, 153
Carbon dioxide
microwave diamond synthesis with high oxygen hydrocarbons—(carbon dioxide, oxygen), 120
Ceramics
application of X-ray photoelectron spectroscopy valence bands in studying ceramic surfaces and interfaces, 164
temperature-variant hardness response of duplex TBCs, 219
Chemical vapour deposition
application of nickel plating for the synthesis of chemical vapour deposition of diamond on steels, 111
characterization of low pressure chemically vapor-deposited tungsten nitride films, 330
diamond thin films synthesized by a multinozzle oxy-acetylene chemical vapour deposition method, 106
effect of oxygen on hydrogenated amorphous carbon films, 77
kinetics and conformality of TiN films from TDEAT and ammonia, 294
measurement of Young's moduli of TiC-coated film by the X-ray method, 247
microwave diamond synthesis with high oxygen hydrocarbons—(carbon dioxide, oxygen), 120
nucleation of diamond particles by hot filament chemical vapour deposition, 115
plasma diagnostics of a d.c. arcjet chemical vapor deposition diamond reactor, 91
properties of chemical-vapor-deposited titanium nitride, 311
stability and surface morphology of films obtained by a chemical vapor deposition process, 281
thermal expansion of chemical vapor deposition grown diamond films, 103
Coatings
decorative hard coatings: advances in optical characterization techniques, 184
measurement of the adhesion of TiN and Al coatings by fracture mechanics tests, 253
nanoindentation response of systems with thin hard carbon coatings, 214
temperature-variant hardness response of duplex TBCs, 219
Conductivity
photothermal characterization of optical thin films, 191
properties of transparent conducting oxides deposited at room temperature, 1
SnO_2 transparent conductor films produced by filtered vacuum arc deposition, 20
Contacts
cusp-like flaws along a rough surface, 240
optical properties and surface morphology studies of palladium contacts on mercuric iodide single crystals, 180
Copper
advanced multilayer metallization schemes with copper as interconnection metal, 257
amorphous $W_{40}Re_{40}B_{20}$ diffusion barriers for ⟨Si⟩/Al and ⟨Si⟩/Cu metallizations, 301
temperature dependence of atomic mixing at the copper–silicon interface, 135

Deposition process
kinetics and conformality of TiN films from TDEAT and ammonia, 294
low temperature preparation of $SrTiO_3$ thin films, 37

low temperature preparation of transparent conducting ZnO:Al thin films by chemical beam deposition, 14
properties of titanium and aluminum thin films deposited by collimated sputtering, 267
selective area deposition of diamond on 4 in Si wafers, 87
Depth profiling
Auger electron spectroscopy studies of interfacial reactions to metal/semiconductor multilayers activated during differential scanning calorimetry measurements, 169
Diamond
application of nickel plating for the synthesis of chemical vapour deposition of diamond on steels, 111
diamond thin films synthesized by a multinozzle oxy-acetylene chemical vapour deposition method, 106
fabrication of amorphous diamond films, 82
microwave diamond synthesis with high oxygen hydrocarbons—(carbon dioxide, oxygen), 120
nanoindentation response of systems with thin hard carbon coatings, 214
nucleation of diamond particles by hot filament chemical vapour deposition, 115
plasma diagnostics of a d.c. arcjet chemical vapor deposition diamond reactor, 91
selected area deposition of diamond on 4 in Si wafers, 87
thermal expansion of chemical vapor deposition grown diamond films, 103
thermal reaction of Ta thin films with polycrystalline diamond, 72
Dielectrics
inhomogeneous dielectrics grown by plasma-enhanced chemical vapor deposition, 64
Diffusion
amorphous $W_{40}Re_{40}B_{20}$ diffusion barriers for ⟨Si⟩/Al and ⟨Si⟩/Cu metallizations, 301
evaluation of amorphous (Mo, Ta, W)–Si–N diffusion barriers for ⟨Si⟩|Cu metallizations, 319

Elastic properties
elastic behaviour of TiN thin films, 209
Electrical properties and measurements
characterization of n-CdS/p-$CuGa_x In_{1-x}Se_2$ thin film heterojunctions, 32
transparent conducting *p*-type NiO thin films prepared by magnetron sputtering, 27
Electron energy loss spectroscopy
new trends in analytical tribology, 173
Electron microscopy
calibration of an off-axis quartz crystal thickness monitor for a pulsed laser deposition system using a high resolution scanning electron microscope, 125
low energy electron microscopy studies of Ge and Ag growth on Si(111), 140
Ellipsometry
characterization of magnetron-sputtered diamond-like thin films for optical coatings in IR, 67
decorative hard coatings: advances in optical characterization techniques, 184
investigation of the adhesion mechanisms of silicon alloy thin films on polymer substrates by IR ellipsometry, 204

Finite element analysis
finite element studies of tensile testing on thin film multilayers, 225
Fluorescence
deposition and characterization of multicomponent oxide films and multilayers from aqueous solution, 51

Germanium
low energy electron microscopy studies of Ge and Ag growth on Si(111), 140
Glass
characterization of phosphosilicate glass films obtained using plasma-enhanced chemical vapor deposition from tetraethylorthosilicate and trimethylphosphite, 287
Graphite
optical properties and equilibrium temperatures of titanium-nitride- and graphite-coated Langmuir probes for space application, 46

Hardness
nanoindentation response of systems with thin hard carbon coatings, 214
temperature-variant hardness response of duplex TBCs, 219
Heat treatment
interface structure and adhesion of sputtered Ti layers on Si: the effect of heat treatment, 236

Indium
properties of transparent conducting oxides deposited at room temperature, 1
Indium oxide
properties of transparent conducting oxides deposited at room temperature, 1
Infrared spectroscopy
investigation of the adhesion mechanisms of silicon alloy thin films on polymer substrates by IR ellipsometry, 204
Interfaces
stability and surface morphology of films obtained by a chemical vapor deposition process, 281
temperature dependence of atomic mixing at the copper–silicon interface, 135
Ion scattering
further investigation of proton elastic scattering cross-section on carbon and silicon, 153

Metal–oxide semiconductor structures
advanced multilayer metallization schemes with copper as interconnection metal, 257
Metallization
advanced multilayer metallization schemes with copper as interconnection metal, 257
evaluation of amorphous (Mo, Ta, W)–Si–N diffusion barriers for ⟨Si⟩|Cu metallizations, 319
kinetics and conformality of TiN films from TDEAT and ammonia, 294
mass and surface conductivity gain on polymer surfaces metallized using vacuum arc deposition, 341
study of sputtered molybdenum nitride as a diffusion barrier, 306
thermal reaction of Ta thin films with polycrystalline diamond, 72
Metals
overview on the metal/PET adhesion, 230
Molybdenum nitride
study of sputtered molybdenum nitride as a diffusion barrier, 306
Multilayers
advanced multilayer metallization schemes with copper as interconnection metal, 257
Auger electron spectroscopy studies of interfacial reactions in metal/semiconductor multilayers activated during differential scanning calorimetry measurements, 169

finite element studies of tensile testing on thin film multilayers, 225
XRD characterization of multilayered systems, 130

Nanoindentation
nanoindentation response of systems with thin hard carbon coatings, 214
Nickel
mass and surface conductivity gain on polymer surfaces metallized using vacuum arc deposition, 341
Nickel oxide
transparent conducting *p*-type NiO thin films prepared by magnetron sputtering, 27
Nitrides
properties of reactively sputter-deposited Ta–N thin films, 347
Nucleation
nucleation of diamond particles by hot filament chemical vapour deposition, 115

Optical coatings
inhomogeneous dielectrics grown by plasma-enhanced chemical vapor deposition, 64
low temperature preparation of transparent conducting ZnO:Al thin films by chemical beam deposition, 14
photothermal characterization of optical thin films, 191
silicon based, protective transparent multilayer coatings deposited at high rate on optical polymers by dual-mode MW/r.f. PECVD, 58
transparent conducting *p*-type NiO thin films prepared by magnetron sputtering, 27
Optical properties
characterization of n-CdS/p-$CuGa_x In_{1-x} Se_2$ thin film heterojunctions, 32
decorative hard coatings: advances in optical characterization techniques, 184
optical properties and equilibrium temperatures of titanium-nitride- and graphite-coated Langmuir probes for space application, 46
optical properties and surface morphology studies of palladium contacts on mercuric iodide single crystals, 180
optical switching technology for glazings, 6
thermal modeling of a calorimetric technique for measuring the emittance of surfaces and coatings, 146
Optical spectroscopy
decorative hard coatings: advances in optical characterization techniques, 184
thermal stability of pyrolytic tin oxide films on aluminium, 40
Oxidation
kinetics of aluminium film oxidation measured by a modified quartz crystal microbalance, 199
Oxides
deposition and characterization of multicomponent oxide films and multilayers from aqueous solution, 51
low temperature preparation of $SrTiO_3$ thin films, 37
Oxygen
effect of oxygen on hydrogenated amorphous carbon films, 77
microwave diamond synthesis with high oxygen hydrocarbons—(carbon dioxide, oxygen), 120

Palladium
optical properties and surface morphology studies of palladium contacts on mercuric iodide single crystals, 180
Phase transitions
deposition and characterization of multicomponent oxide films and multilayers from aqueous solution, 51
Phosphorus
characterization of phosphosilicate glass films obtained using plasma-enhanced chemical vapor deposition from tetraethylorthosilicate and trimethylphosphite, 287
Physical vapour deposition
mass and surface conductivity gain on polymer surfaces metallized using vacuum arc deposition, 341
temperature-variant hardness response of duplex TBCs, 219
Plasma processing and deposition
characterization of phosphosilicate glass films obtained using plasma-enhanced chemical vapor deposition from tetraethylorthosilicate and trimethylphosphite, 287
properties of mixed-phase BN films deposited by r.f. PACVD, 96
selective plasma deposition, 274
silicon based, protective transparent multilayer coatings deposited at high rate on optical polymers by dual-mode MW/r.f. PECVD, 58
Polymers
investigation of the adhesion mechanisms of silicon alloy thin films on polymer substrates by IR ellipsometry, 204
Pulsed laser deposition
calibration of an off-axis quartz crystal thickness monitor for a pulsed laser deposition system using a high resolution scanning electron microscope, 125

Raman scattering
deposition and characterization of multicomponent oxide films and multilayers from aqueous solution, 51
Reaction kinetics
Auger electron spectroscopy studies of interfacial reactions in metal/semiconductor multilayers activated during differential scanning calorimetry measurements, 169
kinetics of aluminium film oxidation measured by a modified quartz crystal microbalance, 199
Rutherford backscattering spectroscopy
further investigation of proton elastic scattering cross-section on carbon and silicon, 153

Scanning electron microscopy
characterization of magnetron-sputtererd diamond-like thin films for optical coatings in IR, 67
Semiconductors
characterization of n-CdS/p-$CuGa_x In_{1-x} Se_2$ thin film heterojunctions, 32
Sensors
selective area deposition of diamond on 4 in Si wafers, 87
Silane
three-dimensional simulation of an isolation trench refill process, 352
Silicides
Auger electron spectroscopy studies of interfacial reactions in metal/semiconductor multilayers activated during differential scanning calorimetry measurements, 169
evaluation of amorphous (Mo, Ta, W)–Si–N diffusion barriers for ⟨Si⟩|Cu metallizations, 319
Silicon
further investigations of proton elastic scattering cross-section on carbon and silicon, 153
interface structure and adhesion of sputtered Ti layers on Si: the effect of heat treatment, 236
low energy electron microscopy studies of Ge and Ag growth on Si(111), 140
temperature dependence of atomic mixing at the copper–silicon interface, 135

three-dimensional simulation of an isolation trench refill process, 352
Silicon dioxide
three-dimensional simulation of an isolation trench refill process, 352
Silicon nitride
inhomogeneous dielectrics grown by plasma-enhanced chemical vapor deposition, 64
silicon based, protective transparent multilayer coatings deposited at high rate on optical polymers by dual-mode MW/r.f. PECVD, 58
Silicon oxide
inhomogeneous dielectrics grown by plasma-enhanced chemical vapor deposition, 64
investigation of the adhesion mechanisms of silicon alloy thin films on polymer substrates by IR ellipsometry, 204
silicon based, protective transparent multilayer coatings deposited at high rate on optical polymers by dual-mode MW/r.f. PECVD, 58
Silver
low energy electron microscopy studies of Ge and Ag growth on Si(111), 140
Solar cells
characterization of n-CdS/p-$CuGa_x In_{1-x} Se_2$ thin film heterojunctions, 32
Sputtering
characterization of magnetron-sputtered diamond-like thin films for optical coatings in IR, 67
properties of reactively sputter-deposited Ta–N thin films, 347
properties of transparent conducting oxides deposited at room temperature, 1
spatial composition variation in sputtered Ti–W films, 334
study of sputtered molybdenum nitride as a diffusion barrier, 306
transparent conducting *p*-type NiO thin films prepared by magnetron sputtering, 27
Steel
application of nickel plating for the synthesis of chemical vapour deposition of diamond on steels, 111
Stress
elastic behaviour of TiN thin films, 209
fabrication of amorphous diamond films, 82
finite element studies of tensile testing on thin films multilayers, 225
properties of mixed-phase BN films deposited by r.f. PACVD, 96
properties of titanium and aluminum thin films deposited by collimated sputtering, 267
Structural properties
properties of mixed-phase BN films deposited by r.f. PACVD, 96
study of sputtered molybdenum nitride as a diffusion barrier, 306
Structural properties
low temperature preparation of $SrTiO_3$ thin films, 37
Surface and interface states
application of X-ray photoelectron spectroscopy valence bands in studying ceramic surfaces and interfaces, 164
Surface defects
cusp-like flaws along a rough surface, 240
Surface morphology
cusp-like flaws along a rough surface, 240
stability and surface morphology of films obtained by a chemical vapor deposition process, 281
Surface phonons
elastic behaviour of TiN thin films, 209
Surface roughness
cusp-like flaws along a rough surface, 240

Tantalum
properties of reactively sputter-deposited Ta–N thin films, 347
thermal reaction of Ta thin films with polycrystalline diamond, 72
Tin dioxide
SnO_2 transparent conductor films produced by filtered vacuum arc deposition, 20
Tin oxide
thermal stability of pyrolytic tin oxide films on aluminium, 40
Titanium
interface structure and adhesion of sputtered Ti layers on Si: the effect of heat treatment, 236
mass and surface conductivity gain on polymer surfaces metallized using vacuum arc deposition, 341
properties of titanium and aluminum thin films deposited by collimated sputtering, 267
spatial composition variation in sputtered Ti–W films, 334
Titanium carbide
measurement of Young's moduli of TiC-coated film by the X-ray method, 247
Titanium nitride
elastic behaviour of TiN thin films, 209
manufacturing aspects of low pressure chemical-vapour-deposited TiN barrier layers, 325
measurement of the adhesion of TiN and Al coatings by fracture mechanics tests, 253
measurement of Young's moduli of TiC-coated film by the X-ray method, 247
optical properties and equilibrium temperatures of titanium-nitride- and graphite-coated Langmuir probes for space application, 46
properties of chemical-vapor-deposited titanium nitride, 311
Transmission electron microscopy
overview on the metal/PET adhesion, 230
Tungsten
spatial composition variation in sputtered Ti–W films, 334
Tungsten nitride
characterization of low pressure chemically vapor-deposited tungsten nitride films, 330

X-ray absorption
new trends in analytical tribology, 173
X-ray diffraction
overview on the metal/PET adhesion, 230
low temperature preparation of $SrTiO_3$ thin films, 37
measurement of Young's moduli of TiC-coated film by the X-ray method, 247
XRD characterization of multilayered systems, 130
X-ray photoelectron spectroscopy
application of X-ray photoelectron spectroscopy valence bands in studying ceramic surfaces and interfaces, 164

Zinc oxide
low temperature preparation of transparent conducting ZnO:Al thin films by chemical beam deposition, 14
